

EXECUTIVE SUMMARY

The importance of information technology (IT) security continues to grow. About 8 in 10 managers responsible for security at their firms across the 12 countries covered in CompTIA's *International Trends in Cybersecurity* expect security to become an even higher priority over the next two years (79% net of moderately higher + significantly higher). Anticipated priority two years from now is significantly higher among firms in Maturing Economies (86% net higher) vs. those in Mature Economies (68% net higher). Nearly three-quarters of businesses in Australia expect IT security to grow in importance (72% net higher).

Due to the evolving nature of IT, the great majority of organisations have had to respond by changing the way their company approaches security. In Australia, similar to many of the other countries, the greatest factor has been the change in IT operations, especially as firms move to the cloud or implement new mobility strategies.

Another significant driver of change in security approach is reports of security breaches at other firms as well as internal incidents. Furthermore, across all the companies surveyed, nearly three-quarters report having at least one security breach/incident* in the past 12 months (73%).

OCCURRENCE OF SECURITY BREACHES

Over the past 12 months

*Stemming from internal or external causes.

IMPORTANCE OF CYBERSECURITY

Expected priority in 2 years from today

TOP DRIVERS FOR CHANGING APPROACHES TO CYBERSECURITY

Among Australia businesses

1. Change in IT operations (e.g. cloud, mobility)
2. Reports of security breaches at other firms
3. Internal security breach or incident
4. Knowledge gained from training/certification
5. Change in business operations or client base

Note: see the last page for which countries are categorised in Maturing Economies vs. Mature Economies.

While 6 in 10 Australian organisations experienced at least one security incident, slightly more than a half had one or more serious breaches. Human error is becoming more of a factor in security breaches for most companies, especially for those in Maturing Economies (64% net overall significantly more + moderately more). In Australia, it is more of a factor now vs. two years ago for more than half (56% net human error more of a factor).

On the brighter side, roughly 9 in 10 firms use some type of security training to assess or improve security knowledge among employees such as new employee orientation, ongoing security training programs, random security audits, online courses, etc. (92% overall and 89% in Australia). And most managers believe it is important to test after IT security training to confirm knowledge gains (91% net very important + somewhat important in Australia). Moreover, employers in Maturing Economies especially find IT security certifications to be very valuable (49%) compared to those in Mature Economies (25%). Seven in ten Australian managers indicate that IT security certifications are very valuable (24%) or valuable (47%) in terms of validating security-related knowledge/skills or evaluating job candidates.

IMPORTANCE OF TESTING AFTER CYBERSECURITY TRAINING

HUMAN ERROR A MAJOR CONTRIBUTOR TO SECURITY RISK

TOP SOURCES OF HUMAN CYBERSECURITY ERROR

Among Australia businesses

1. Failure to get up to speed on new threats
2. End user failure to follow policies and procedures
3. General carelessness
4. Intentional disabling of security
5. Lack of expertise with websites and applications
6. IT staff failure to follow policies and procedures

RESEARCH METHODOLOGY

CompTIA's *International Trends in Cybersecurity* was conducted to collect and share quantitative information on behaviors, techniques, and opportunities associated with IT security across 12 countries. More information and all country snapshots are available at CompTIA.org/internationalsecurity.

A total of 1,509 IT and business executives participated in the online survey during January – February 2016, yielding an overall margin of sampling error at 95% confidence of +/- 2.5 percentage points. Sampling error is larger for subgroups of the data.

As with any survey, sampling error is only one source of possible error. While non-sampling error cannot be accurately calculated, precautionary steps were taken in all phases of the survey design, collection and processing of the data to minimise its influence.

CompTIA is a member of the Marketing Research Association and abides by its guidelines for survey best practices and research ethics.

Job Role

22%	Executive Mgt. (CEO, President, Owner, etc.)
23%	Senior Mgt. – IT function (CIO, CSO, VP, etc.)
10%	Middle Mgt. – IT function (Director, Team Lead)
11%	Staff level – IT function
21%	Senior Mgt. – Business function (CFO, VP, etc.)
6%	Middle Mgt. – Business (Director, Team Lead)
8%	IT Consultant

SURVEY DEMOGRAPHICS

Firm Size

5%	Micro firm (5 to 9 employees)
34%	Small firm (10 to 99 employees)
30%	Medium firm (100 to 499 employees)
30%	Large firm (500 or more employees)

Primary Industry

20%	Information Technology (IT)
14%	Manufacturing (other than IT related)
11%	Professional services (other than IT related)
10%	Retail/Wholesale (other than IT related)
6%	Healthcare/Medical
8%	Financial/Banking/Insurance
2%	Media/Publishing/Entertainment
3%	Government (federal, state, local)
7%	AMTUC (Agriculture, Mining, Transportation, Utilities, Construction)
6%	Education
3%	Hospitality
9%	Other industry

Countries

n	Maturing Economies	n	Mature Economies
126	Brazil	125	Australia
131	India	125	Canada
125	Malaysia	125	Germany
126	Mexico	125	Japan
125	South Africa	125	UK
125	Thailand		
126	UAE		
884	Total Maturing	625	Total Mature
1,509	Total number of respondents in the study		

ABOUT COMPTIA

CompTIA is the voice of the world's information technology (IT) industry and workforce.

Its members are the companies at the forefront of innovation; and the professionals responsible for maximising the benefits organisations receive from their investments in technology.

CompTIA is dedicated to advancing industry growth through educational programs, market research, networking events, professional certifications, and public policy advocacy.
